

BE SMART! ENJOY SMART SOLUTION IN ATOS

MULTILINGUAL

Easy language selection for the country of installation

Input and output via customisable web services and interaction with other applications

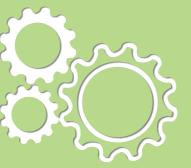

INTUITIVE

Use of spontaneous gestures

Customisable for all kinds of business

SOFTWARE

Because it is so easy to customise, Atos is the ideal solution for all types

of business, from the catering to the retail sectors.

"We developed this software to offer a practical solution to the market's needs.

Our development brief required the new software to be:

- easy to use
- extremely intuitive
- · compatible with the needs of all types of business

We also wanted the software to play a key part in business management:

- · by covering all operations like room, booking and menu management
- by determining POS strategy on the basis of real time data sharing and providing sales side and purchasing side administrative functions
- by handling all kinds of payment, connecting to centralised systems for electronic payments and managing prepaid cards

Our vast experience in the field of cash registers, combined with the latest, most evolved systems, has produced a truly unique piece of software.

ATOS provides really effective assistance in optimising your business.

Read the brochure and try it for yourself to see what we mean! You can download a demo version from Google Play."

THE WAITER'S MODULE: FLOOR MANAGERS WILL LOVE IT

A plugin module for order management.

Designed and developed precisely to solve the little and large problems of any restaurant floor, Waiter's does away with the omissions and imprecisions of human waiters, reduces waiting times and improves the overall efficiency of your service.

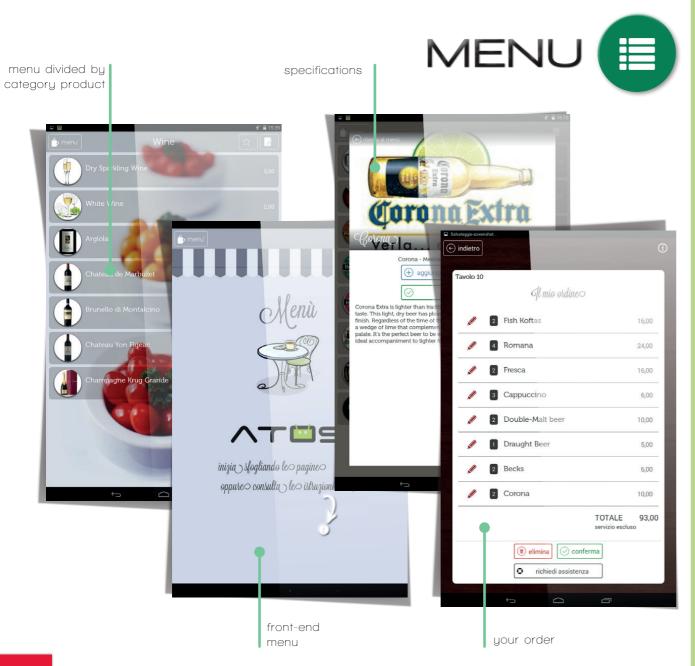

Waiter's optimises order management and cashier operations and guarantees effective, real time control of all floor activities. Garçon simplifies and speeds up all operations by interacting with your PC, touch screen, hand-held terminals and fiscal printers

Waiter's makes your entire production cycle more efficient and ensures complete control over all operations.

Waiter's can be installed on fixed POS terminals and mobile tablets.

INDOOR

Improved savings and reliability from this hi-tech menu!

This plugin module for managing the indoor menu lets you install your menu on a tablet to replace the usual paper version.

This offers numerous benefits including accurate updates and savings in time and money. You can tell a smart business from the efficient way it uses the latest technology.

Multilingual menus.

OUTDOOR

A screen for telling people outside exactly what is waiting for them inside!

This plugin module for outdoor menu management lets you display your menu on a screen outside your restaurant. The screen can display the menu of the day, special offers and quality details too. This valuable tool really brings your business into the high-tech era.

CUSTOMER RELATIONS

PAYMENT

Open to the latest technologies!

FIDELITY

Customised fidelity incentives for guaranteed results.

This Fidelity plugin module is the perfect tool for improving customer fidelity. The customer relations management function lets you run successful projects that deliver guaranteed results.

Customised fidelity projects for all kinds of business: Points systems, tracking of prepaid card sales, meal vouchers for card recharging, identification and authentication of customer accounts.

SPECIALISATION BY BUSINESS TYPE

TAKE AWAY

A properly organised take-away and dine-at-home service!

This plugin module is designed to keep track of orders from occasional customers and regular customers on a user-configurable list (service start and finish times and interval in minutes). At the moment of delivery (sale) the module lets the cashier recall the saved order and use it to print a VAT receipt.

The module provides the following functions:

- Service diary;
- Occasional and regular customer management

- Order changes, time changes and cancellations;
- Order printing;
- Printing on delivery (sale) of bills, invoices or receipts.

TICKETING

Pay and collect for a more streamlined organisation

A plugin module for meal ticket management. The perfect way to improve efficiency in catering businesses like takeaways. Easy to customise to meet your needs. No more queues! Guarantees a more rapid flow of payments.

FAST FOOD

Quick service, quick cash!

A plugin module for optimising fast food POS management.

Boost your sales and offer your customers a faster service with customised, modular menus.

Improve the efficiency of your business, optimise your resources and boost your profits while simplifying menu and order management and speeding up deliveries.

medium SOFT DRINK

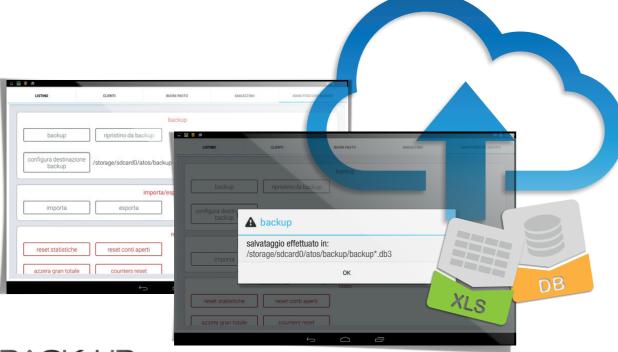

DATA MANAGEMENT

BACK UP

Data security always, everywhere.

A plugin module for setting up and configuring automatic backups. This is the ideal solution for managing backups and ensuring data security. Backups can be configured to run hourly, daily, weekly or at custom intervals.

Another benefit is the possibility of storing data on a cloud server in future.

STATISTICS

The statistics you need to keep track of your business.

A dedicated reporting section lets you:

- · view real time sales statistics in graphic form
- personalised queries by product, operator, document type, etc.
- export of query results as standard comma-separated values (csv), file saving and e-mailing

NETWORKING

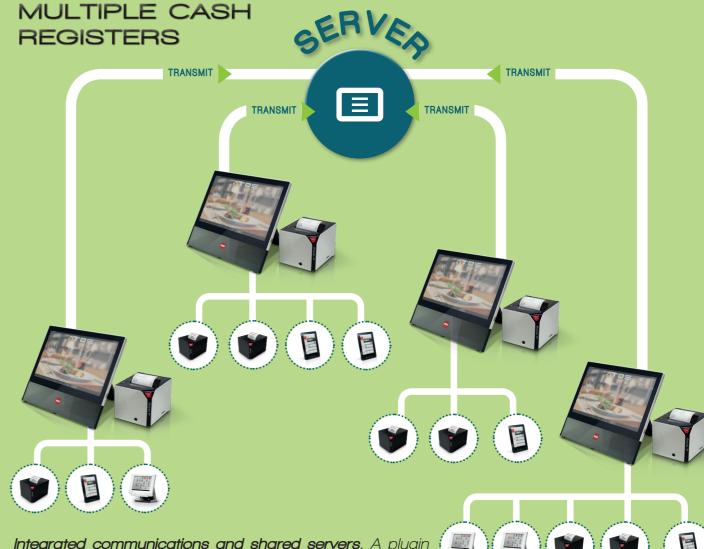

BACK OFFICE

Networked data analysis I An in-the-cloud back office includes a provisioning function to handle all aspects of administration from back office to front office. You can also register customers on line and manage occasional and fixed price services

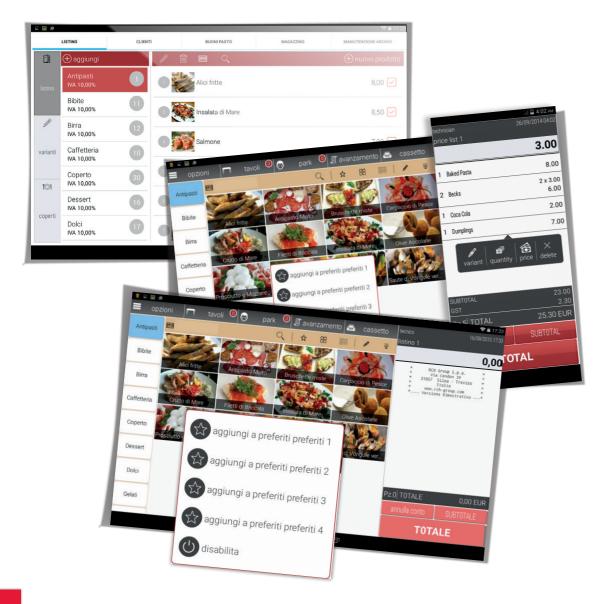

Integrated communications and shared servers. A plugin module for managing more than one point of sale. This is the ideal solution for all kinds of business when a number of cash registers have to be networked. Data is centralised on a single device that acts as server
